                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq_name: /SIDS1/gcgdata/geneseq/geneseqn-embl/NA2000.DAT:AAA08400
                                                                                                                                                                                                                                                                     The present invention describes a high-affinity monoclonal antibody characterised by an acid-washed enzyme-linked immunosorbent assay (EIA). The antibody is used in cancer therapy. Association of the new antibody with an antigen is favoured over dissociation in vivo and they therefore have longer localisation times at target sites, resulting in a higher concentration of antibodies localised at the target sites. Targeting the antibody to a site in vivo is improved. The concentration of antibody does not need to be too high which reduces side-effects and costs of the concentration of antibody to a site in vivo is improved. The concentration of antibody to a site in vivo is improved. The concentration of antibody to a site in vivo is improved. The concentration of antibody to a site in vivo is improved. The concentration of antibody to a site in vivo is improved. The concentration of antibody the concentration of antibody to a site in vivo is improved. The concentration of antibody th
                                                                                                                                         therapy. The present sequence encodes the heavy chain variable region of a monoclonal antibody having affinity for carcinoembryonic antigen of a monoclonal antibody having affinity for carcinoembryonic antigen (CEA, a tumour associated antigen), which is used in the exemplificat:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A new high-affinity monoclonal antibody acid-washed enzyme-linked immunosorbent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2000-375618/32.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or condition such as autoimmune disorder, immune response to a graft, allergic response or an immune response to a therapeutic protein. The antibody is also useful for research purposes, e.g., in staining and isolating CTLA4-bearing cells. The antibody is also useful for T-cell typing, for isolating specific II-2 receptor-bearing cells or fragments of the receptor, for vaccine preparation, and for determining the effectiveness of an agent to down-regulate CTLA4 activity. The present sequence encodes the heavy chain of humanised anti-CTLA4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          an antibody that specifically recognises a molecule expressed only on activated T cells, and a toxic group. The T cell molecule is preferrably human cytotoxic T lymphocyte associated antigen 4 (CTLA4). The antibody of the invention is a humanised anti-CTLA4 antibody comprising a sequence of 128 or 142 amino acids fully defined in the
                                                                                                                                                                                                                                                                                                                                                                                                                            169

                                                                                                                                                                                preferably human cytotoxic T lymphocyte associated antigen 4 (CTLA4). The antibody of the invention is a humanised anti-CTLA4 antibody comprising a sequence of 128 or 142 amino acids fully defined in the specification. The antibody-toxic group conjugate is useful for modulating the immune response in a subject suffering from a disorder or condition such as autoimmune disorder, immune response to a graft, allergic response or an immune response to a therapeutic protein. The antibody is also useful for research purposes, e.g., in staining and isolating CTLA4-bearing cells. The antibody is also useful for receptor for vaccine preparation, and for determining the effectiveness of an agent to down-regulate CTLA4 activity. The present sequence encodes the heavy chain of humanised anti-CTLA4
                                                                                                                                                                                                                                                                                                                                                         The invention relates to an antibody-toxic group conjugate comprising an antibody that specifically recognises a molecule expressed only on activated T cells, and a toxic group. The T cell molecule is
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antibody-toxic group conjugate comprising an antibody that recognizes a molecule expressed only on activated T cells, useful for modulating immune response for treating autoimmune disorder, allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 O'Hara
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Carreno

The antibody can be used in a method of inhibiting intimal hyperplasia in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restraces of following against a process of the control of the control of the cells of th

The murine anti-PLAP Vk gene (AAQ11846) CDRs were used to reshape the human anti-PLAP gene Vk (AAQ11848). The specific binder for human PLAP contains at least one of the former 3 CDRs and/or at least one of the latter CDRs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic specific binder for human placental alkaline phosphatase - for treating and diagnosing cancers e.g. ovarian and colon cancers and pleural effusions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  to a human patient. Antibody reagents can be used to identify, e.g. by serum testing or imaging, and/or to treat PLAP producing cancers. Such cancers can occur as, e.g. breast cancer, ovarian cancer and colon cancer or can manifest themselves as liquids such as pleural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Verhoeyen ME

             in many tumours types including neuroblastoma, osteosarcomas and other soft tissue sarcomas, medulloblastomas, high grade astrocytomas, melanomas and small cell lung cancer. The peptide can be detectably labelled, preferably with 99m-Tc, for tissue imaging of cells expressing GD2. It can also be used to target delivery of a therapeutic or pre-therapeutic agent, such as a toxin, streptavidin or a pro-drug converting enzyme, to cells expressing GD2. The peptide may further comprise CD8 to facilitate the formation of GD2-targeted lymphocytes. T cells containing the peptide can also be used to target GD2-producing
                                                                                                                                                                                                                                                         The present sequence encodes a recombinant single chain peptide, 3G6-ScFv. The peptide is an antibody construct comprising the varegions of the heavy and light chains of an antibody against distaloganglioside (GD2) as a single chain Fv fragment (ScFv). G
                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant single chain anti-disialoganglioside useful to detect tumour cells expressing GD2 and therapeutic agents, e.g. toxins, to such cells

The peptide is an antibody construct comprising the variable regions of the heavy and light chains of an antibody against disialoganglioside (GD2) as a single chain Fv fragment (scFv). GD2 occurs in many tumours types including neuroblastoma, osteosarcomas and other soft tissue sarcomas, medulloblastomas. The peptide can be detectably labelled, preferably with 99m-Tc, for tissue imaging of cells expressing GD2. It can also be used to target delivery of a therapeutic or pre-therapeutic agent, such as a toxin, streptavidin (e.g. present sequence) or a pro-drug converting enzyme, to cells expressing GD2. The peptide may further comprise CD8 to facilitate the formation of

AAT77852 standard;
                                     Novel recombinant conjugate antibody molecules comprise a monoclonal antibody specific for a surface structure of antigen presenting cells (APC), genetically modified to contain at least one antigen exclusively at one or more preselected sites. The conjugate is capable of delivering the antigen to APC and eliciting an immune response to the antigen. The new conjugates are useful as vaccines and are able to elicit an enhanced immune response without the use of an adjuvant. In a specific example, a conjugate was constructed using the murine anti-human class II monoclonal antibody secreted by hybridoma 44HI04. The peptide CLTB36 was chosen as antigen; it consists of a tandemly linked T and B cell epitope derived from HIV WN strain. The present sequence encodes the heavy chain variable region which was PCR amplified from 44HI04 and used in the preparation of a

All described is a hybridoma that produces (I). (I) is useful in specific binding assays, affinity purification, drug or toxin targeting, imaging, and genetic or immunological therapeutics for various cancers. The present sequence encodes a VH domain derived from a 260F9 hybridoma, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ring

The CC method comprises exposing a wheat grain sample to the antibody, under binding conditions, and detecting the binding. The antibody has been CC raised with a preparation comprising the HMW-GS member in a substantially denatured form. The immunoassay is useful for assessing CC processing and/or product quality characteristics of grain from a wheat CC cultivar and for discriminating HMW-GS in wheat grains associated with CC superior bread and pasta-making qualities, for identifying preferred CC wheat cultivars in plant breeding. Simple assessment of HMW-GS CC composition and wheat grain quality can be done from small samples of CC grain, meal or flour, e.g. 500mg-10g, making it more economical than CC prior art large scale analysis methods which are very labour intensive. CC The present sequence encodes a specifically claimed antibody fragment CC for use in the method of the invention.
                                                                                                                                                                                                                  Align seg 1/1 to:

The expression vectors are introduced into animal cells and the transformant thus obtained is cultured for the prodn. of a chimeric human Ab reacting with the ganglioside GM2. In contrast to mouse monoclonal Abs, the chimeric human Abs will not cause anti-mouse Ig Ab prodn. In the patient's body but show a prolonged blood half-life, with a reduced frequency of adverse effects, so that it can be expected to be superior to mouse monoclonal Abs in the efficacy in the treatment of human cancer, for instance.

Mouse anti-GM2 monoclonal Ab KM-796 and KM-750 and rat KM-603 heavy and light chain sequences are given in AAQ45426-30.

CDR regions for use in chimeric Abs are indicated in the

In contrast to prior art constructs based on mouse monoclonal antibodies, the chimeric human antibodies do not cause anti-mimmunoglobulin production.
frequency of adverse effects when antibodies.
                                                                                                                                                                                                                                                                                        This antibody chain is derived from Hybridoma cells producing Anti-GM2 Monoclonal Antibody KM-603.

Two batches of oligonucleotides crae used for the synthesis of the variable domains. These are CC ligated and inserted into expression vector pFMT. CC pFMT (EP-440147) comprises a modified pKR233-2 plasmid (Sall-BamHI CC deleted, HindiII replaced by BamHI) with an insert comprising a CC first leader sequence (P1) (AAQ13098) from a bacterial pectate lyase CC gene, a sequence (P4) (AAQ13101) coding for the variable domain of a cC human antibody heavy chain (HuVhys), a ribosome binding site (RBS), CC a second leader sequence (P2) (AAQ13099), and a sequence (VL) (CC (AAQ13111) coding for the variable domain of a human antibody light CC chain (HuVllys). TAG sequences are represented in AAQ13108-09. The libraries may be used to isolate clones producing specific contibodies or antigen-binding antibody fragments by screening with

A synthetic variable light chain sequence (AAT34096) was also constructed. Humanised 2B6 (see also AAT34093-94) is specific for human interleukin-5 (IL-5) and can be used for the diagnosis and treatment of IL-5-mediated conditions, e.g. asthma,

            The sequences given in AAQ31360-61 and AAQ31365-66 are plasmids enceportions of monoclonal antobodies which were derived from mouse hybridomas. The DNA encoding complementarity determining regions (CDR's) was isolated by polymerase chain reaction. The antibodies produced recognises human interleukin-6 receptor (II-6R). The hybridoma cells were transformed with plasmids containing fragments of the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the antibody from the antibody gene which caused the production of the antibody from the antibody gene which caused the production of the antibody from the production of the antibody from the production of the antibody from the production of the antibody gene which caused the production of the antibody gene which caused the production of the antibody from the production of the antibody from the production of the antibody from the production of the production of the antibody gene which caused the production of the productio
